

Targeted consultation addressed to the participants to the stakeholder dialogue on Article 17 of the Directive on Copyright in the Digital Single Market

Fields marked with * are mandatory.

INTRODUCTION

The Directive on Copyright in the Digital Single Market (Directive 2019/790/EC, the 'DSM Directive') requires the Commission to issue guidance on the application of Article 17, in particular regarding the cooperation between online content-sharing service providers and rightholders. The guidance should take into account the discussions held during the stakeholder dialogue meetings organised by the Commission pursuant to paragraph 10 of that article. The DSM Directive is addressed to the Member States who are required to transpose it by 7 June 2021. At this stage, the guidance will focus on assisting Member States in that task.

Following an open call for interest to participate in the stakeholder dialogue, the Commission organised six stakeholder dialogue meetings between October 2019 and February 2020 to gather the views of relevant stakeholders on the main topics related to the application of Article 17.

This consultation paper builds on the discussions at the stakeholder dialogue and presents the initial views of the Commission services with the view to finalising the Commission guidance.

We encourage the representative organisations to gather the views of their members and to provide, to the extent possible, a coordinated reply to the consultation. Where this is not possible, replies can be provided by individual members.

About yourself

* I'm giving my contribution as

- Organisation representing users, including fundamental rights organisations
- Organisation representing online content-sharing service providers
- Organisation representing rightholders
- Public authority
- Other

* Name of your organisation/authority

Civil Liberties Union for Europe

E-mail (this won't be published)

I. SCOPE OF SERVICES COVERED BY ARTICLE 17

Background

Article 17 applies to online content-sharing service providers as defined in Article 2(6) of the Directive. An online content-sharing service provider is defined as an information society service provider of which the main or one of the main purposes is to store and give the public access to a large amount of copyright-protected works or other protected subject matter uploaded by its users, which it organises and promotes for profit-making purposes.

Article 2(6) also provides a non-exhaustive list of excluded providers of services, which are not online content-sharing service providers within the meaning of the Directive.

Special rules apply to new online content-sharing service providers, which meet the conditions in Article 17 (6).

Possible elements for the guidance

The guidance should indicate how to transpose the definition of 'online content-sharing service provider' into national law and explain the different elements of the definition itself, as well as of the list of service

providers, which are expressly excluded.

The non-exhaustive nature of the exclusion for particular online service providers by use of the term 'such as' denotes that other service providers could also qualify as an excluded service provider on a case-by-case basis.

In order to provide legal certainty, Member States should explicitly set out in their implementing laws all elements of the definition of 'online content-sharing service provider' in Article 2(6), including the excluded service providers set out in Article 2(6). As regards these excluded service providers, the guidance should state that the Union legislature has expressly excluded from the scope of the definition the particular examples set out in Article 2(6).

For other services, which are not identified as examples but which may also be excluded, a case-by-case assessment would be necessary.

Recital 63 states that a case-by-case assessment would be required in order to determine whether an online service provider falls within the scope of the rules in Article 17. This does not affect the possible application of Article 3(1) and (2) of Directive 2001/29/EC to excluded service providers using copyright-protected content, as recalled by recital 64.

Article 2(6) should be read in the light of recitals 62 and 63. In order to increase legal certainty as to the scope and as an aid to interpretation, Member States should be advised to also transpose elements of Recitals 62 and 63. Member States should apply the different elements of the definition, such as the concept of 'large amount of copyright protected content' in the light of these recitals, while they should refrain from further defining these elements going beyond the text of the directive, in order to avoid fragmentation.

Member States should bear in mind that the definition is drafted in a sufficiently neutral manner, which takes account of possible changes in modes of delivery, technology and usage and the fact that the DSM Directive will have to be applied in circumstances, which may change over time.

Question 1: Are there any additional elements related to the definition of an online content-sharing service provider, besides those outlined above, which you consider require some guidance? If yes, please indicate which ones and how you would suggest the guidance to address them.

2600 character(s) maximum

Civil Liberties Union for Europe (Liberties) agrees that a case-by-case assessment is required to determine whether a service falls within the scope of Article 17. We find it similarly crucial that the exclusion list set out in Article 2 (6) is non-exhaustive. These criteria ensure that the circumstances are evaluated without binding the hands of the courts. The Commission should insist on these criteria.

The guidance should also require Member States to implement Recital 62 and 63 in order to introduce harmonized new legislation across Europe. Profit-making criteria should be further elaborated by the Commission to help the implementation process and later the courts by offering a clear explanation of the legislator's intention.

II. AUTHORISATIONS (Art. 17 (1-2))

Background

Article 17(1) requires Member States to provide that online content-sharing service providers, as defined in Article 2(6), perform an act of communication to the public or an act of making available to the public for the purposes of this Directive when they give the public access to protected content uploaded by their users and therefore need to obtain an authorisation from relevant rightholders, for instance by concluding a licensing agreement. Under Article 17(2) the authorisation obtained by the online content-sharing service providers must also cover the acts carried out by users, under certain conditions.

Possible elements for the guidance

(i) Authorisation models

The guidance should explain how Member States should approach the requirement of ‘authorisation’ in Article 17(1). The term ‘authorisation’ is not defined and it should be interpreted in the light of the aim and objective of Article 17.

Article 17 is a *lex specialis* to Article 3 of Directive 2001/29/EC and of Article 14 of Directive 2000/31/EC. This is confirmed by Recital 64, which states clearly that Article 17 does not affect the concept of communication to the public or of making available to the public elsewhere under Union law, nor does it affect the possible application of Article 3(1) and (2) of Directive 2001/29/EC to other service providers using copyright-protected content. As such, Member States would not be able to rely in their transposition of Article 17 on their implementation of either of those directives in relation either to the notion of ‘authorisation’ or indeed for the notion of ‘communication to the public’. Therefore, Member States should explicitly introduce into national law the notion of ‘authorisation’ for the *lex specialis* ‘act of communication to the public’ in Article 17(1).

Article 17(1) provides that an authorisation may for instance include a licensing agreement and this is also set out in Recital 64. Accordingly, an authorisation may take the form of a licensing agreement but may also take another form in national law. The guidance could give indications of different authorisation schemes that Member States could provide for, taking into account the specificities and practices of different sectors. Both individual and collective licensing solutions should be possible. Extended collective licences (ECL) could be considered in specific cases and for specific sectors, provided that they comply with the conditions of Article 12 of the DSM Directive.

The guidance would also recall that rightholders are not obliged to grant an authorisation to online content-sharing service providers, as explained in recital 61. Nevertheless, where rightholders do not grant an authorisation, online content-sharing service providers are not liable for copyright infringements if they comply with the conditions set out in Article 17(4) (see section III.1).

In order to foster the grant of authorisations in any chosen form at national level and to ensure the *effet utile* of Article 17(1), Member States could be recommended to maintain or establish voluntary mechanisms to facilitate agreements between rightholders and service providers. For example, voluntary mediation mechanisms could be considered in specific cases or sectors to support parties willing to reach an agreement but facing difficulties in the negotiations.

(ii) Authorisations covering users

Member States should implement explicitly in their legislation Article 17(2) under which an authorisation granted to online content-sharing service providers should also cover acts carried out by (i) users acting for non-commercial purposes or (ii) users whose activity does not generate significant revenues. It is important to bear in mind that these authorised uses are in addition to what else is authorised for content-sharing service providers.

Under this provision, authorisations granted to service providers are deemed to cover the acts, within the material scope of the authorisation granted, that are carried out by users falling in any one of these categories (non-commercial purpose or non-significant revenues). It is sufficient for a user to satisfy one of these conditions to be covered by the authorisation.

The guidance could illustrate this provision, which would for example cover users uploading a home video including music in the background or users uploading a tutorial generating limited revenues, which includes music or images when no exceptions apply. On the other hand, users acting on a commercial basis and deriving significant revenues from their uploads would be outside the scope of or not covered by that authorisation (unless the parties have explicitly agreed to cover also these users contractually). Member States should not set out quantitative thresholds when implementing the concept of 'significant revenues' which should be examined on a case-by-case basis. Member States should be recommended to assess the notion of 'significant revenue' by reference to all the circumstances of the user's activity in question, including whether there is a licence agreement where the parties have agreed on specific thresholds (which should however not go below what is authorised under Article 17(2)).

Member States should interpret the notion of authorisation in Article 17(2) in light of recital 69 according to which service providers do not have to obtain a separate authorisation when rightholders have already authorised users to upload specific content. In these cases, the act of communication to the public has already been authorised within the scope of the authorisation granted to the user. The same recital also indicates that service providers should not presume that their users have in all cases obtained all the necessary authorisations for the content they upload.

In order to enhance transparency and legal certainty, the guidance could encourage the Member States to put in place an exchange of information on authorisations between rightholders, users and service providers.

Question 2: Are there any additional elements related to authorisations under Article 17(1) and 17(2), which should be covered by the guidance? If yes, please explain which ones and how you would suggest the guidance to address them.

2600 character(s) maximum

The relationship between the DSM Directive and other pieces of legislation should be as clear as the Commission states in the guidance.

It would be great if the Commission could provide a non-exhaustive list of other forms of authorization for helping Member States harmonize the DSM Directive accordingly. Both voluntary and non-voluntary authorization schemes would be helpful. The guidance should explicitly help Member States understand 'exceptions and limitations' regarding non-commercial communication to the public, keeping in mind that not only rightholders may grant authorization for using copyrighted content, but so too may it be granted by the law.

The prohibition on general monitoring systems is also important. Article 17 does not impose upload filters or general monitoring requirements on OCSSPs, which is also underpinned by the European Court of Human Rights (ECtHR) in *Payam TAMIZ v. the United Kingdom* (2017) . It is crucial to maintain the prohibition on general monitoring obligations. General monitoring would undermine freedom of expression and data protection by imposing ongoing and indiscriminate control of all online content with mandatory use of automated filtering tools. The no-monitoring principle protects free expression and can be maintained while creating oversight and accountability for the use of automated tools in online content moderation.

Question 3: Do you have any concrete suggestions on how to ensure a smooth exchange of information between rightholders, online content-sharing service providers and users on authorisations that have been granted?

2600 character(s) maximum

Authorization should be transparent for many reasons; one of them is the users' right to freedom of expression. Access to an open database would create a more balanced copyright system by allowing exchange of information on authorisations between rightholders, OCSSPs and the users through a single, EU-wide database open to the public.

Transparency, in general, would establish a balanced copyright ecosystem in which all the stakeholders could input and receive information. For this, a public database would be ideal, where not only authorization should be uploaded, but exceptions and limitations, Creative Commons, or other licensing options could be uploaded by the author so that both users and OCSSPs can check the information uploaded to the database. Also, see the answer to question 15.

III. SPECIFIC LIABILITY REGIME UNDER ARTICLE 17

Article 17(4) establishes a specific liability regime for online content-sharing service providers that have not obtained an authorisation from the relevant rightholders under the applicable national rules implementing Article 17(1). Therefore, the *effet utile* of this provision will depend on the system of 'authorisation' put in place by the Member State under Article 17 (1) and (2). As outlined in recital 61, the goal of Article 17 is 'to foster the development of the licensing market between rightholders and online content-sharing service providers'. Article 17(4) only becomes applicable in those cases in which the primary goal of authorisation of acts of communication to the public performed by online content sharing service providers within the meaning of Article 17(1), for instance by concluding a licensing agreement, could not be achieved.

In the absence of an authorisation, Article 17(4) sets out three cumulative conditions, which service providers may invoke as a defence against liability.

The conditions in Article 17(4) are subject to the principle of proportionality, as specified in Article 17(5). In this respect, the guidance should give indications to Member States on the practical application of the proportionality criteria to the conditions set in Article 17(4), notably how the type, size and audience of the service, the availability of suitable and effective means and the related costs, as well as the type of content uploaded by the users could be considered in different cases.

1. BEST EFFORTS TO OBTAIN AN AUTHORISATION (ARTICLE 17(4)(a))

Background

The first condition in Article 17(4) letter (a) is that service providers should be liable for unauthorised acts of communication to the public, including acts of making available to the public, unless they demonstrate they have made best efforts to obtain an authorisation. The principle of proportionality, as set out in Article 17(5), should be taken into account when assessing whether a service has made its best efforts under Article 17(4) letter (a). Pursuant to Article 17(8), the application of Article 17 should not lead to any general monitoring obligation.

Possible elements for the guidance:

The guidance could give non-exhaustive indications of actions carried out by service providers that could constitute best efforts to obtain an authorisation by the service providers. In particular, it should illustrate, which action on the part of service providers would constitute best efforts. This would include any action taken by service providers to seek out and/or engage with rightholders and the response, if any, to such solicitation and/or engagement by rightholders. Member States may wish to include such actions, which could, if relevant, vary from sector to sector, in their transposition law.

The authorisation models defined by Member States pursuant to Article 17(1) will have an impact on how easily service providers may be able to fulfil the requirement of 'best efforts' to obtain an authorisation. The threshold of 'best efforts' may be more easily satisfied where a Member State has taken measures to facilitate the grant of authorisations, for example with regard to licensing models, mediation mechanisms or exchange of information. Where a Member State has opted for a system, which leaves greater flexibility in the authorisation regime, service providers may need to adduce evidence that they have tried and been unable to get an authorisation. Keeping records of service providers' engagement with rightholders may help addressing this situation. The evidential standard to prove best efforts would depend therefore on the type of authorisation in national law. For example, participation in a voluntary mediation, where available, could be taken into account in order to satisfy best efforts.

The guidance should recall the importance of applying the best efforts obligation on a case-by-case basis and according to the proportionality principle and the criteria provided for in Article 17(5).

To illustrate the best effort obligation, the guidance should make clear that service providers have to engage proactively as a minimum with rightholders which can be easily identified and located, in order to

seek an authorisation. This includes rightholders representing a broad catalogue of works or other subject matter, or their representatives with a mandate to act on their behalf such as collective management organisations (CMOs) acting in accordance with Directive 2014/26/EU.

At the same time, in accordance with the principle of proportionality, service providers should not be expected to proactively seek out all rightholders whose content may be uploaded on their services, in particular those who are not easily identifiable by any reasonable standard. The guidance should however explain that online content-sharing service providers should as a rule enter into negotiations with those rightholders that wish to offer an authorisation for their content, irrespective of whether their type of content (eg. music, audio-visual content, images, text, etc...) is prevalent or is less common on the website of the service provider. Nevertheless, pursuant to the principle of proportionality, in certain cases (notably in case of smaller service providers) a lower level of effort to obtain an authorisation may be expected for types of content which are less common on the website of a given service provider (e.g. for images or texts on a video-sharing platform).

In the light of Recital 61, licensing agreements should be fair and keep a reasonable balance between both parties. That recital also states that rightholders should receive appropriate remuneration for the use of their works or other subject matter. As a consequence, service providers refusing to conclude a licence offered on fair terms and which maintains a reasonable balance between the parties should not be considered to have deployed their best efforts to obtain an authorisation. On the other hand, service providers should not be required to accept licensing offers that are not on fair terms and which do not keep a balance between the parties, including as regards the remuneration to be paid.

The guidance should refer to the relevant provisions of Directive 2014/26/EU applying to licences negotiated and concluded by CMOs, in particular Article 16 (conducts of negotiations and licencing terms) and Article 35 (resolution of disputes). As mentioned under Section II, Member States may also maintain or establish voluntary mechanisms aimed at facilitating the conclusion of licensing agreements between online content-sharing service providers and rightholders.

Question 4: In which cases would you consider that an online content-sharing service provider has made its best efforts to obtain an authorisation, in light of the principle of proportionality? Please give some concrete examples, taking into account the principle of proportionality.

2600 character(s) maximum

Liberties believes that the 'best efforts to obtain authorization' requirement should be connected to the core business of OCSSPs. This would mean that if a copyright-protected work that is not part of the core business of the OCSSP is uploaded, the OCSSP is not required to make 'best efforts'.

In case rightholders fail to respond to authorization requests or deny authorization despite reasonable terms, it should be considered as fulfillment of 'best effort to obtain authorization' on behalf of the OCSSP.

In case of an ongoing debate over rights ownership, it should be to the detriment of neither the service providers nor the users.

Question 5: In your view, how should online content-sharing service providers, in particular smaller service providers, make their best efforts to obtain an authorisation for content, which is less common on their service?

2600 character(s) maximum

As we previously mentioned, 'best efforts to obtain authorization' should only be required in cases involving the core business of the OCSSPs. This means that in those cases when a user uploads copyrighted work or other subject matter without proper authorization, but it falls outside the scope of the core business model of the OCSSP, then the service provider does not have to make special efforts to obtain authorization. This argument is based on Recital 62, the scope of the Directive targets online services that:

- Play an important role in the online content market by competing with other online content services,
- For the same audiences,
- The main or one of the main purposes of which is to store and enable users to upload and share a large amount of copyright-protected content with the purpose of obtaining profit,
- Organizing and promoting in order to attract a larger audience, including by categorizing it and using targeted promotion within it.

These are conjunctive conditions; therefore 'best efforts' requirements are not applicable to smaller service providers if the copyrighted work does not fit into their core business, and they neither categorized nor organized the content in question.

Question 6: Are there any additional elements related to Article 17(4)(a), which should be covered by the guidance besides those outlined above? If yes, please explain which ones and how you consider the guidance should address them.

2600 character(s) maximum

The prohibition of general monitoring requirements should be one of the cornerstones of the guidance. Even though some might understand that 'best efforts' should include embedding a filtering mechanism, Liberties is of the opinion that any monitoring obligation would be a disproportionate burden on OCSSPs and would also breach the right to personal data protection of the users. See our answer to question 13.

The guidance should clearly state that no service provider has an obligation to monitor uploads for copyright purposes.

2. 'BEST EFFORTS' TO AVOID UNAUTHORISED CONTENT (Art. 17(4)(b))

Background

The second condition set out in Article 17(4) is that online content-sharing service providers should be liable for the use of unauthorised content unless they demonstrate that they have made their best efforts, in accordance with high industry standards of professional diligence, to ensure the unavailability of specific works and other subject matter for which the rightholders have provided them with the relevant and necessary information. The principle of proportionality, as set out in Article 17(5), and Article 17(7) should be taken into account. Pursuant to Article 17(8), the application of Article 17 should not lead to any general monitoring obligation.

Possible elements for the guidance:

Member States should bear in mind that these provisions are subject to the obligation on them in Article 17 (7) and (9) to ensure that legitimate uses remain unaffected by the cooperation of service providers with rightholders. The guidance should give indications to Member States on how this could be achieved, as explained in section IV.

The guidance should recommend that in their implementing laws Member States should not mandate the use of technology or impose any specific technological solutions on service providers in order to demonstrate best efforts. This would not only ensure a technologically neutral and future proof application of Article 17(4)(b) but also provide for a less intrusive approach. The service providers together with rightholders may cooperate on the best way to approach identification of the works in question, including by recourse to technology taking into account that the cooperation should not lead to any general monitoring obligation.

The guidance should underline that service providers have to act diligently when making their best efforts to implement any relevant solutions. As stated in Recital 66, to assess whether a given service provider has made its best efforts, account should be taken of whether the service provider has taken all the steps that would be taken by a diligent operator to achieve the result of preventing the availability of unauthorised works or other subject matter on its website taking into account best industry practices and the effectiveness of the steps taken in light of all relevant factors and developments. However, service providers should remain free to choose the technology or the solution that they consider the most appropriate to comply with the best efforts obligation in their specific situation, given that account should be taken of the principle of proportionality.

The stakeholder dialogue showed that content recognition technology is already used today to manage the use of copyright protected content, at least by the major online content-sharing service providers. Besides content recognition technology based on fingerprinting, other solutions, such as watermarking, solutions based on metadata and key word search or a combination of different technologies are currently deployed to detect unauthorised content.

Therefore, in most cases, it is expected that service providers will rely (or continue to rely) on technological tools in order to comply with their obligation under Article 17(4)(b) but it is not a prerequisite for the application of Article 17(4). The guidance should in this context recall that the deployment of any solution, including use of technology, such as content recognition technologies, has to respect Article 17(7) and 17(9), which lays down safeguards for legitimate uses (see section IV below).

The guidance should also recall the importance of applying the 'best effort' obligation on a case-by-case basis and according to the proportionality principle and the criteria provided for in Article 17(5). In this respect, the guidance should give indications to Member States along the following lines:

- The type, size and audience of the service: larger service providers with a significant audience may be expected to deploy more advanced and costly solutions/technologies than 'smaller' service providers, with more limited audiences and resources. It could be more proportionate to expect smaller service providers to resort to simpler solutions (like metadata or key word search) as long as these solutions are effective. In some cases, notably for small service providers, relying on ex post action following rightholders' notifications (notice and take down) may be proportionate, as explained in recital 66.
- The availability of suitable and effective means and the related costs should also be considered, for example when service providers buy solutions from third parties/ technology providers, when these are developed in-house as well as the costs related to human review in the context of disputes (see Section IV). The cumulative cost of different solutions that may need to be implemented by a service provider should also be considered, as well as limitations of technologies depending on the type of content.

- The type of content uploaded by the users: when a service provider makes available different types of content, the level of efforts to be made may vary depending on whether the content is prevailing in their website or residual. It can be expected that service providers make more efforts regarding the former as compared to the latter.

In line with Article 17(4)(b), the guidance should underline that the best efforts to ensure the unavailability of specific unauthorised content are to be assessed on the basis of the *'relevant and necessary information'* rightholders must provide to online content-sharing service providers. Whether any information provided by rightholders is "relevant and necessary information" in any given situation should be assessed on a case-by-case basis. Recital 66 specifies that if no such information is provided by rightholders, service providers are not liable for unauthorised uploads of unidentified content.

The guidance would provide some examples of what may constitute relevant and necessary information in different cases. Such information will vary depending on the solutions deployed by service providers (for example metadata on the work such as title, author/producer, duration; fingerprints or the actual content file). The information provided by rightholders should be relevant and accurate to allow service providers to take action on that basis. Member States should be free to define sanctions for abuse of the cooperation mechanism laid down in Article 17, such as the provision of false information.

Flexibility could be left to rightholders and service providers to agree on mutually convenient cooperation arrangements in view of ensuring the unavailability of unauthorised content, within the boundaries of the safeguards for legitimate uses.

Question 7: In which cases would you consider that an online content-sharing service provider has or has not made its best efforts to ensure the unavailability of specific unauthorised content in accordance with high industry standards of professional diligence and in light of the principle of proportionality and the user safeguards enshrined in Article 17(7) and (9)? Please give some concrete examples.

2600 character(s) maximum

Liberties supports the position that the use of content recognition technologies in the context of Article 17(4)b has to respect the user rights. The clear message that complying with Article 17 does not impose using content recognition technologies or filtering in any way is important for transposing the DSM Directive. Liberties also believes that the 'best efforts' requirement is not connected to monitoring user uploads.

Question 8: Which information do you consider 'necessary and relevant' in order for online content-sharing service providers to comply with the obligation set out in Article 17(4)(b)?

2600 character(s) maximum

The compatibility of Article 17(4)(b) with the Charter is a challenge because the use of copyright-protected work always depends on the context in which it is used. An open and frequently updated database with information about the copyright-protected work or other subject matter, such as territorial and temporal scope, special exceptions, limitations, and reference to public domain (if it exists) should be part of the provided information. Rightholders are liable to provide accurate information.

Liberties strongly believes that the transposition of Article 17(4)b should include sanctions for false ownership claims. These penalties should be proportionate and punish bad-faith and repeat offenders more severely.

Question 9: Are there any other elements related to the best efforts to ensure the unavailability of unauthorised content, besides those outlined above, for which you think some guidance is needed? If yes, please explain which ones and how you consider the guidance should address them.

2600 character(s) maximum

As mentioned above, rightholders should be liable to provide accurate information, and Member States should define sanctions for the abuse of cooperation between OCSSPs and rightholders.

3. NOTICES SUBMITTED BY Rightholders TO REMOVE UNAUTHORISED CONTENT AND THE RELEVANT AND NECESSARY INFORMATION TO PREVENT FUTURE UPLOADS (ART. 17(4)(c))

Background

The third condition set out in Article 17(4) (c), which is also subject to the principle of proportionality laid down in paragraph 5 and the safeguards for legitimate uses in paragraph 7, is that online content-sharing service providers should be liable for the use of unauthorised content unless they demonstrate that they have acted expeditiously, upon receiving a sufficiently substantiated notice from the rightholders, to disable access to, or to remove from their websites, the notified works or other subject matter, and that they have made best efforts to prevent their future uploads in accordance with Article 17(4)(b). Pursuant to Article 17 (8), the application of Article 17 should not lead to any general monitoring obligation.

Possible elements for the guidance:

The guidance should give indications to Member States on how they should implement Article 17(4)(c) in their national laws. Member States should bear in mind that the two conditions set in letter (c) are subject to the principle of proportionality provided for in Article 17(5). The ‘best efforts’ that service providers should make to prevent future uploads of notified works should be approached in the same way as in relation to Article 17(4)(b). The guidance should recall the importance of assessing whether the best efforts have been made by service providers on a case-by-case basis.

Member States should also bear in mind that the application of Article 17 should not lead to any general monitoring obligation and that legitimate uses have to be safeguarded as provided for in paragraphs 7 and 9, and as further explained in section IV. This is particularly relevant for the application of the second part of letter (c), according to which service providers have to make their best efforts to prevent future uploads of notified works.

The guidance should also indicate that when implementing Article 17(4) letter (c), Member States need to clearly differentiate the type of information rightholders provide in a ‘sufficiently substantiated notice’ for the removal of content (the ‘take-down’ part of letter (c)) from the “relevant and necessary information” they provide for the purposes of preventing future uploads of notified works (the ‘stay-down’ part of letter (c), which refers back to letter b).

With regard to the elements to be included in a ‘sufficiently substantiated notice’ submitted by rightholders, the guidance should recommend Member States to follow in their implementation the Commission Recommendation on Measures to Effectively Tackle Illegal Content Online[1]. The information provided should be specific and detailed in nature in a way in which it verifies not only the work or protected subject

matter and the specific rights held by the rightholder but where it is alleged to be on the website in question. Points 6 to 8 of the Recommendation list elements that could be included in the notices. As the Recommendation is a horizontal non-binding instrument and therefore not copyright specific, existing national rules and current practices for copyright notices, which may contain more details, could also be applied.

Article 17(4) letter (c) second part (the 'stay down' obligation) refers back to letter (b) of the same paragraph. As a consequence, in order for the service providers to be able to deploy their best efforts to avoid future uploads under this provision, rightholders have to provide them with the same type of 'relevant and necessary' information which is relevant for the application of letter (b). This means for example that, if a service provider uses fingerprinting technologies to avoid future uploads of notified works, receiving as information only the title of a song and its location, as identified in a notice, would be insufficient. In this case, to allow service providers to avoid future uploads of notified works, rightholders would need to provide the services with fingerprints or content files. If rightholders have already provided the 'necessary and relevant' information under letter (b) of Article 17(4) with regard to a specific notified work, they should not be obliged to re-submit the same information for the purposes of 'stay-down', but this should be assessed on a case-by-case basis.

[1] See Commission Communication of 1 March 2018 available at: <https://ec.europa.eu/digital-single-market/en/news/commission-recommendation-measures-effectively-tackle-illegal-content-online>

Question 10: What information do you consider a sufficiently substantiated notice should contain in order to allow the online content-sharing service providers to act expeditiously to disable access /remove the notified content?

2600 character(s) maximum

Liberties believes that the following information is important during the notice procedure:

- Notifier rightholders are required to give information about the content in question, such as location, the reason for notice or a presumption of infringement.
- If there is an ongoing debate between rightholders about the work in question, this fact must be mentioned in the information provided by the notifier rightholder.
- OCSSPs maintain an easy-to-access, easy-to-understand notification (and counter-notification) system for users. The notification system should differentiate according to the subject of the complaints.
- A declaration of good-faith must exist on behalf of notifier rightholder.
- A counter-notice procedure, with a time limit, should be introduced.

Question 11: Are there any other elements related to the 'notice and take down' and 'notice and stay-down' systems provided for in Article 17(4)(c) that should be covered by the guidance? If yes, please explain which ones and how you would suggest the guidance to address them.

2600 character(s) maximum

The guidance should make it clear that the take-down and stay-down procedure must be exceptional. The main principle is that the content stays up until the end of the dispute. OCSSPs are allowed to take down user uploads

- subsequent to a notice and action request
- if said request is sufficiently substantiated

. and the infringing nature of the use is manifest.
These are conjunctive conditions.

Besides our answer to Question 10, Liberties suggests that OCSSPs provide information about the notification to the user about the fact of the notice, the notifier rightholder and the contact data, and the reason. The OCSSP must provide information about the action and possible complaint and redress mechanisms.

4. SPECIFIC LIABILITY REGIME FOR START-UPS (ARTICLE 17.6)

Background

Article 17(6) provides for a specific liability regime for ‘new’ companies, with lighter conditions. This is in practice a two-tier regime applicable to services, which have been active in the EU for less than 3 years and have an annual turnover of less than 10 million euros with different rules applying to them depending on the audience they attract. In practice:

(i) If those ‘new’ services have less than 5 million unique visitors they are required to make their best efforts to obtain an authorisation (Art. 17 (4) (a)) and they have to comply with the ‘notice and take down’ obligation under Art. 17(4) (c), first part.

(ii) If those ‘new’ services have more than 5 million unique visitors they are subject to the same obligations of best efforts to obtain an authorisation and ‘notice and take down’ as services with a smaller audience but in addition, they also need to comply with the obligation to avoid future uploads of notified works under Article 17 (4) (c) second part (‘stay down’ obligation).

For both categories of services, the condition of best efforts to ensure the unavailability of unauthorised content, provided for in Article 17 (4)(b), is not applicable.

Possible elements for the guidance:

The guidance should provide indications to the Member States for the implementation of the specific liability regime set out in Article 17(6). It could focus on certain elements of the liability regime, which may raise practical questions, such as how to calculate the annual turnover of the services and the number of monthly unique visitors. It would remind for example that the annual turnover needs to be calculated in accordance with the Commission Recommendation 2003/361/EC for SMEs. It would also explain that the number of monthly unique visitors refers to visitors across the Union, as explained in recital 66, and not per Member State.

The guidance should also clarify that the principle of proportionality provided for in Article 17(5) and the safeguards for legitimate uses under Article 17(7) apply to the liability regime for ‘new’ services. In this context, the guidance could provide some examples of what best efforts could be expected from the ‘new’ services covered by Article 17(6) for obtaining authorisations and where applicable, for preventing future uploads of notified works, in the light of the principle of proportionality.

Question 12: What specific elements of the specific liability regime for “new” services, provided for in Article 17(6), should in your opinion be addressed in the guidance and how?

IV. SAFEGUARDS FOR LEGITIMATE USES OF CONTENT (Art. 17(7)) and REDRESS MECHANISM FOR USERS (Art. 17(9))

Background

Article 17(7) and 17(9) lay down rules aiming to ensure that any action undertaken together by service providers and rightholders does not lead to the unavailability of content which does not infringe copyright. This is of particular importance (but not only) for the application of Article 17(4) letter (b) and second half of letter (c), whereby online content-sharing service providers need to make their best efforts to ensure the unavailability of unauthorised content and to prevent future uploads of notified works. Article 17(7) also provides that the Member States must ensure that users in each Member State are able to rely on the existing exceptions or limitations for quotation, criticism, review and use for the purpose of caricature, parody or pastiche when they upload and make available their content on online content-sharing service providers' websites. Under Article 5 of Directive 2001/29/EC these exceptions were optional and therefore not all Member States have implemented them. Article 17 (7) makes these exceptions mandatory for all Member States for the uses of copyright protected content covered by this provision.

Article 17(9) requires online content-sharing service providers to put in place a redress mechanism allowing users to challenge the blocking or removal of their content. Disputes can occur when content-sharing service providers disable or remove access to user uploaded content, whereas users consider their uploads legitimate, for example uses of third party content under an exception or limitation to copyright.

Article 17(9) further requires that the Directive shall in no way affect legitimate uses, and shall not lead to any identification of individual users nor to the processing of personal data, except in accordance with Directive 2002/58/EC and Regulation (EU) 2016/679. It also requires online content-sharing service providers to inform their users in their terms and conditions that they can use works and other subject matter under exceptions or limitations to copyright and related rights provided for in Union law.

Possible elements for the guidance:

The guidance should explain what Member States have to do to implement Article 17(7) and the relationship between that provision and Article 17(4). Article 17(7) is addressed to safeguarding any content uploaded by users that does not infringe copyright or related rights including by virtue of the application of any exception or limitation. Such non-infringing use is often referred to as 'legitimate use'. In addition, Article 17(7) second paragraph introduces certain mandatory exceptions for users that upload content online.

Member States should be recommended to explicitly transpose in their law the text of Article 17(7) first paragraph whereby the cooperation between online content-sharing service providers and rightholders, in particular under Article 17(4), must not result in the prevention of the availability of works or other subject matter uploaded by users, which do not infringe copyright and related rights, including where such works or other subject matter are covered by an exception or limitation.

Member States are required to transpose in their national laws the mandatory exceptions in Article 17(7)

second paragraph covering the case of content uploaded by users on online content-sharing services for:

(a) quotation, criticism, review

(b) use for the purpose of caricature, parody or pastiche

Whilst the exceptions or limitations in Directive 2001/29/EC are optional in nature and addressed to any user, Article 17(7) applies to all users in all Member States who must be able to rely on these exceptions or limitations when they upload content on online content-sharing service providers' websites. Recital 70 explains that allowing users to upload and make available content generated by them for the purposes of the exceptions or limitations in Article 17(7) is particularly important for 'striking a balance between the fundamental rights laid down in the Charter of Fundamental Rights of the European Union ('the Charter'), in particular the freedom of expression and the freedom of the arts, and the right to property, including intellectual property'.

(i) Legitimate uses under Article 17(7)

Examples of legitimate uses may include (1) uses under exceptions and limitations, (2) uses by those who hold or have cleared the rights in the content they upload or covered by the authorisation under Article 17 (2); (3) uses of content not covered by copyright or related rights, notably works in the public domain or for example content where the threshold of originality is not met.

The guidance could recall that uses under exceptions and limitations cover the upload and making available of content under the mandatory exceptions in Article 17(7) but also under other – optional - exceptions that Member States may have implemented under Article 5 of Directive 2001/29/EC. Some of those are particularly relevant for uses on online content-sharing services and Member States, which have not done so, could be recommended to implement them for uses covered by Article 17 (for ex. incidental use)[1].

Member States that may have already implemented the exceptions made mandatory by Article 17(7) under Directive 2001/29/EC should review their legislation to make sure it complies with Article 17(7) and if needed, adapt it accordingly. Member States whose laws do not provide for these exceptions will have to transpose them as a minimum for the uses covered by Article 17.

The guidance should give indications to the Member States on the interpretation of the mandatory exceptions, in line with the case law of the Court of Justice of the European Union.

(ii) Practical application of Article 17(4) in compliance with Article 17(7)

The guidance should also give indications to the Member States as to how they can direct online content-sharing service providers and rightholders to apply in practice Article 17(4) in compliance with Article 17(7). The objective should be to ensure that legitimate content is not blocked when technologies are applied by online content-sharing service providers under Article 17(4) letter (b) and the second part of letter (c).

The guidance should explain that the balancing sought by the Directive requires, besides the effective complaint and redress mechanism discussed in the subsequent section, that the cooperation between service providers and rightholders does not result in blocking legitimate uses. Therefore, the guidance would take as a premise that it is not enough for the transposition and application of Article 17 (7) to only

restore legitimate content ex post, once it has been blocked. When service providers apply automated content recognition technologies under Article 17(4), on the basis of the relevant and necessary information provided by the rightholders, legitimate uses should also be considered at the upload of content.

It should be born in mind that in the current state of the art, content recognition technology cannot assess whether the uploaded content is infringing or covered by a legitimate use. However, technology may assist service providers to distinguish uploads likely to be infringing for the purposes of Article 17(4) from uploads likely to be legitimate, based on the application of technical parameters as explained below. In order to ensure compliance with Article 17(7) in practice, automated blocking of content identified by the rightholders should be limited to likely infringing uploads, whereas content, which is likely to be legitimate, should not be subjected to automated blocking and should be available.

This distinction between likely infringing and likely legitimate uploads would not introduce any new legal concepts, nor would it imply a final legal assessment as to whether an upload is legitimate or not, but it would be a reasonable and practical way for service providers to apply Article 17(4) in line with Article 17(7) when they use content recognition technology. This mechanism should also not prevent the possible use of technology for reporting and remunerating the use of authorised content under contractual terms agreed by rightholders and service providers.

Under this approach, when uploads match with the relevant and necessary information provided to them by the rightholders, service providers should assess their legitimacy in compliance with Article 17(7) and proceed, where applicable, to block likely infringing uploads. In such a case users should still be able to contest the blocking under the redress mechanism provided for in Article 17(9), which requires human review for the contested content before a decision is taken whether it should stay down or be restored.

In cases when it is not possible for online content-sharing service providers to determine on a reasonable basis whether an upload is likely to be infringing and the service providers use content recognition technology, the service providers should notify the user that (part of) the upload matches with the information (e.g. fingerprint) provided by the rightholders. If the user contests the infringing nature of its upload, service providers should submit the upload to human review for a rapid decision as to whether the content should be blocked or be available. Such content should remain online during the human review. If rightholders disagree with the decision of service providers to keep the content up, they would be able to submit a notice in compliance with Article 17(4) letter (c) to ask for the removal of the content that they consider infringing. If, on the other hand, upon being notified by the service provider, the user does not contest the infringing nature of the upload, the content could be blocked without further review, without prejudice to users' ability to rely on other available redress, including judicial review.

The human review process should be swift and allow both rightholders and users to provide their views. If, as a result of the human review, the service provider decides to disable or remove the uploaded content, it should inform the user of the outcome of the review; and the user should be able to have recourse to the out-of-court dispute resolution mechanism, provided for in Article 17(9).

The distinction between likely infringing and likely legitimate uploads could be carried out by service providers in cooperation with rightholders based on a number of technical characteristics of the upload, as appropriate. Relevant technical parameters could be, among others, the level of match with the reference file provided by rightholders for the purposes of Article 17(4), the length/size of third party content used in the upload and whether it is surrounded by user's own content. For example, in application of such technical parameters, the upload of a video of 30 minutes, where 29 minutes are an exact match to a

reference file provided by a rightholder, could likely be considered an infringing one, unless it is in the public domain or the use has been authorised. On the other hand, a user generated video composed by very short extracts, such as one or two minutes of different scenes from third party films, accompanied by additional content such as comments added by the user for the purpose of reviewing these scenes could be more likely to be legitimate because potentially covered by an exception such as the quotation exception. Similarly still images uploaded by users which match only partially the fingerprints of a professional picture could be legitimate uploads under the parody exception, as they could be 'memes', i.e. new images created by users by adding elements to an original picture to create a humoristic or parodic effect.

The application of technical parameters should not be arbitrary and should be without prejudice to any legal decision on the nature of the content uploaded, i.e. whether it is an infringement of copyright or a related right or not.

Member States should remain free to introduce specific measures to discourage the abuse of this mechanism by users or rightholders.

Finally, in order to minimise the risk that authorised content uploaded with the authorisation of rightholders is blocked, Member States may consider recommending service providers to use the practice of 'whitelisting', which allows rightholders to indicate to the service providers users and uses that they have authorised. For example, in case of co-productions or partnerships, broadcasters can indicate to service providers which other broadcasters or partners are authorised to upload their content. Such uses would not require the application by service providers of content recognition technologies for blocking purposes.

(iii) Complaint and redress mechanism under Article 17(9)

Article 17(9) requires Member States to provide for a complaint and redress mechanism that online content-sharing service providers have to make available to users in the event of dispute over the blocking or removal of their content; it also requires Member States to ensure that out-of-court redress mechanisms are available for the settlement of these disputes. When approaching Article 17(9) Member States should bear in mind that the obligation on service providers to put in place a complaint and redress mechanism should be implemented in line with the Union law rules on freedom to provide services, including the 'country of origin' principle provided for in Article 3 of Directive 2000/31/EC on e-commerce, when applicable.

The guidance should give indications to the Member States on how they could instruct service providers to apply the complaint and redress mechanism in practice. It could suggest that when content is blocked as a result of the application of the mechanism described above for the practical application of Article 17(4) in compliance with Article 17(7), the contested content, which is likely infringing should stay down pending the human review required under the redress mechanism. This would correspond to the approach that only uploads likely to be infringing could be automatically blocked under Article 17(4) in compliance with Article 17(7) and Article 17(9). Content that service providers remove ex post under the notice and take down procedure under Article 17(4) letter (c) should only stay down pending the redress, provided that the notice submitted by rightholders is a 'sufficiently substantiated' notice.

In line with the requirement of Article 17(9) that the complaints by users be processed without undue delay, the guidance should suggest that as a rule service providers and rightholders must react to complaints from users within a reasonably short timeframe to ensure that the mechanism is expeditious. If rightholders do

not react in a reasonable timeframe, content which has been blocked or taken down should become available or be restored. The guidance should also recall rightholders' obligation to duly justify their requests to have content uploaded by users blocked or removed and encourage rightholders to provide this justification in clear and simple terms to make it understandable to an average internet user.

If the final decision by service providers is to keep the content unavailable, users must be able to contest this decision through the impartial out-of-court dispute settlement mechanism, which Member States have to make available. The guidance should indicate that the out-of-court dispute settlement mechanism can be an existing one but with relevant expertise to handle copyright disputes. It should also be easy to use and with no cost for users.

The guidance should also indicate to the Member States that they need to implement in their law the obligation on online content-sharing service providers to inform their users in their terms and conditions that users can use works and other subject matter under exceptions or limitations to copyright and related rights provided for in Union law.

The guidance could also recommend how service providers can increase users' awareness of what may constitute legitimate uses, as required by Article 17(9). For example, Member States could encourage the service providers to put in place standard forms for users to contest the blocking or removal of their content. This could also be accompanied by information aiming to foster users' awareness of copyright concepts and to encourage a responsible behaviour when uploading content online.

Finally, the guidance should underline that any processing of personal data and identification of users that may be required in the context of the application of Article 17 needs to be done in compliance Directive 2002/51/EC on e-privacy and Regulation 2016/679 on general data protection. Member States should monitor the correct application of these rules.

[1] Article 5.3 (h) of Directive 2001/29/EC

Question 13: Do you have additional suggestions to implement Article 17(7) to ensure a fair balance between different fundamental rights notably between copyright and freedom of expression? Would you agree with the approach presented above or do you consider other solutions could be used?

2600 character(s) maximum

Freedom of expression is the basis for any debate and a safeguard of democracy. It is therefore of utmost importance that Article 17 (7) be explicitly implemented. Liberties also supports the idea that additional optional exceptions and limitations should be implemented to national law, such as incidental inclusion. Incidental inclusion would be critically important because it often happens with the case of political speeches. For example, when the background music of a protest leads to the removal of content because of an assumption of copyright infringement.

The protection against blocking is crucial and a general monitoring obligation should be explicitly prohibited by the guidance in line with Article 17 (8) and the case law of the courts.

For many reasons, Liberties believes that no obligation can be introduced on OCSSPs to block all uses of the same copyright-protected work. It would mean having a false sense of faith in the accuracy of the filters, producing significant false positives. Automated filtering software used for this purpose is notoriously inaccurate and is likely to catch lawful content that does not breach any law and may in fact be essential for

societal and political debate. Different exceptions and limitations could apply because the context can be different.

Under Article 22 of the GDPR, users have the right not to be subject to a decision based solely on automated processing which produces legal effects concerning him/her or similarly significantly affects him /her unless it is based on i) a contractual relationship; ii) authorized by law; iii) or it is based on the users' explicit consent. Number i) and ii) are not applicable. For i), accepting terms of services are not considered contractual relationships. Therefore, data processing in relation to the automated decision-making process can only rely on users' explicit consent under Article 4 (11) of the GDPR. The right of the users to contest an automated decision entitles them not to give consent to any kind of automated filtering method without human intervention. Users must be able to understand decisions made about them as well as understand how automated decision-making affects them, and they must also understand how to contest a decision if necessary according to Article 21 (1) of the GDPR. Human intervention is also essential for transparent decision making and transparent appeal mechanisms to balance the imbalance between OCSSPs, rightholders and users. There cannot be an effective remedy without human intervention.

Question 14: Do you have additional suggestions on how the guidance should address the implementation of the complaint and redress mechanism and of the out-of-court dispute settlement under Article 17(9)?

2600 character(s) maximum

The guidance should clarify that failure of rightholders to duly justify the reasons for their takedown requests within a reasonably short timeframe must result in an invalid notification and the content must stay up. In these cases the uploading user does not have to reply to the notification.

It is also important to avoid loopholes in the system, therefore if a complaint has undergone human review then the next step can only be out-of-court dispute resolution or court procedures but no in-platform procedure can be initiated again.

Liberties supports the solution offered by the Commission: to avoid OCSSPs circumvent the users' rights ensured in Article 17 by using terms of conditions. Exceptions and limitations are crucial for freedom of expression. The terms and conditions of OCSSPs should not hamper rights deriving from Article 17.

Question 15: Are there other elements than those outlined above that should be addressed for the concrete implementation of Article 17(7) and (9)? If yes, please explain which ones and how the guidance should address them.

2600 character(s) maximum

We suggest introducing robust transparency mechanisms both for rightholders and OCSSPs. Transparency is a precondition for gathering evidence about the implementation and the impact of existing laws. It enables legislators and judiciaries to understand the regulatory field better and to learn from past mistakes. Only through the combination of comprehensive transparency reports by states, regulators, OCSSPs, rightholders, will users' organizations be able to draw a realistic picture of how Article 17 works in practice.

Both rightholders and OCSSPs should publish in an open access data-set at least once a year, in a structured data file available in an easy-to-access, easy-to-understand way, with regular updates to the following data:

- The rules applied to content.
- Policies about the content and the rules applied according to the guidance, how processes are elaborated

and how rules are enforced.

- Data on the total number of content debated, flagged, removed and for what purpose.
- Also who indicated the removal and the rule that was violated.
- Data on the total number of disputes.
- Information about the rights of the users for their personal data, their rights under the
- GDPR and a step-by-step description of how to exercise rights ensured by the law.
- Information about notice mechanisms and the rights of the users.
- Access to dispute resolution and to human intervention.
- The outcome of regular, comprehensive, and credible due diligence, such as through robust human rights impact assessments, to identify how all aspects of copyright policies and practices affect users' fundamental rights to freedom of expression and information, to privacy, and to mitigate any risks posed by those impacts.
- Disclosure of comprehensive and credible due diligence.
- The features used by these algorithms to optimize and flag content.
- How these systems affect the fundamental rights of users and how risks are mitigated.
- Disclosure of the data used for developing algorithmic systems.
- Transparency about government demands and the responses. As we know, some of the governments tend to silent their opposition using copyright claims. Therefore OCSSPs must disclose their relationships with governments.
- Fully disclose their processes for responding to government demands to restrict or block content, or to access user information.
- Report data on the number and types of these requests they receive--and from which authorities--and comply with. Transparency reports, similarly to Google's, set a good example.

V. INFORMATION TO Rightholders (Art. 17(8))

Background

Under Article 17(8), online content-sharing service providers need to provide rightholders, at their request, with information on the functioning of the tools used for ensuring the unavailability of content. Where they conclude licensing agreements with rightholders, the service providers also need to provide them with information on the use of their content, without however having to provide rightholders with detailed and individualised information for each work or other subject matter identified (recital 68).

Possible elements for the guidance

The guidance should recall the different elements set out in Article 17(8) and explain in particular how Member States should direct the parties to apply this provision in practice. It should give indications as to the information that service providers should provide to rightholders, if requested, to comply with it. For example, information on content recognition tools deployed by service providers to avoid unauthorised content could include descriptions on the efficiency of these tools, the general parameters used for their deployment, as well as any changes made overtime to the operation of these tools. As regards information on the use of content covered by the agreements concluded between service providers and rightholders, the guidance should recall that service providers are not required to provide detailed and individualised information on each work, and encourage the development of standardised reporting through voluntary cooperation between stakeholders. Some more specific requirements on reporting exist already under Article 17 of Directive 2014/26/EU and govern the relationship between users and CMOs.

In line with the Commission Recommendation on illegal content online, in order to ensure a high level of transparency to users, the guidance could recommend that Member States encourage online content-sharing service providers to publicly report on the functioning of their practices with regard to Article 17(4).

Question 16: What are the most important elements that the guidance should cover in relation to the information that online content-sharing service providers should provide to rightholders on the functioning of their tools to ensure the unavailability of unauthorised content and on the use of rightholders' content under Article 17(8)? Please provide examples of particular information that you would consider as covered by this obligation.

2600 character(s) maximum

Question 17: Are there any other elements beyond the ones listed above which should be covered by the guidance? If yes, please explain which ones and how you would suggest the guidance to address them.

2600 character(s) maximum

The collective representation of users would balance the imbalance between OCSSPs and the rightholders on one side and individual users on the other. Consumer or user organizations, and NGOs, could also seek redress and represent users in procedures.

VI. OTHER TOPICS

Question 18: Do you think the guidance should address any other topic related to Article 17? If yes, please indicate which topics you consider should be included in the guidance and how you consider the guidance should address them.

2600 character(s) maximum

Liberties would like to raise the possible shortcomings of using the country-of-origin principle. What we learned from the problems of GDPR enforcement is that when a regulation heavily relies on a single European country's justice system, it can never be effective and will make users even more vulnerable to the big tech companies. As an example, the Irish Data Protection Authority (Data Protection Commission) is the lead supervisory authority with regard to cases related to Google or Facebook in Europe and therefore heavily overburdened by complaints.

The country of origin principle could also mean that the extent of the fundamental rights of users depends on one single Member State. Even in the case of the GDPR it is critical, even though harmonized rules and networks of authorities are protecting the personal data of users. The Data Protection Commission is reluctant to issue a decision in many cases and has a different understanding of strong data protection enforcement compared to countries where Data Protection Authorities are more active, such as Germany or France.

Liberties supports the common position of national authorities within the CPC Network concerning the protection of consumers on social networks, which argues that platforms "cannot deprive consumers in the EU of the right to bring proceedings in the Member State of the consumer's habitual residence and the consumer may not be deprived of the protections of EU consumer law".

Accordingly, the contract concluded by a consumer with a social network operator shall be governed by the law of the country where the consumer has his habitual residence. (...) Any different choice of law should deprive the consumer of the protection afforded to him by EU Consumer Law. Choice of law clauses must be sufficiently transparent, in that they should specify unambiguously that consumers still have the possibility to invoke mandatory provisions of the laws of their own country (under Article 6 (2) Rome I). Choice of law clauses which convey the incorrect impression that the contract is governed only by a distant and non-accessible jurisdiction and a foreign and unclear applicable law is unfair pursuant to Directive 93/13/EC and it is not valid under EU law. The contract cannot exclude or hinder the consumer's right to take legal action or exercise any other legal remedy (e.g. participate in a class action).

FINAL REMARKS
